

Powerful tools that are tailored to your market data management workflow.

The Application Compliance Tool (ACT) is fully customisable workflow tool for managing the recertification and onboarding process of proprietary market data applications. ACT gives a clear and dynamic view of the exchange compliance obligations for all your firm's applications.

Effective management

ACT allows clients to manage their market data application workflow, from onboarding through to regular recertification. In addition, by leveraging Axon PEAR, licensing and policy requirements can be identified within minutes.

Flexible

Fully customisable online questionnaire entirely tailored to client's workflow and proprietary information.

Automation

Schedules and automates the recertification of market data application by application owners via a centralised intuitive web-based interface including comparison against previous surveys.

The way market data should be managed.

Our technology-enabled market data compliance platform is an industry game-changer.

Core features

Integration with PEAR

Integrating ACT with Axon's PEAR product enables clients to instantly identify the impact on applications from market data pricing and policy changes, and ensures the correct licensing is in place.

Policy announcements tab

Provides a customisable view of announcements, showing only those relevant to each user.

Licensing tab

Consolidated view of licensing use and requirements tailored to each users application universe.

User dashboard

The comprehensive user dashboard provides the market data team with complete oversight and control of the recertification and onboarding process.

Automation

Scheduling of the application recertification is customisable and includes reminders to application owners to complete.
